

# Water Science and Technology

Volume 58, Number 12

## Contents

- 2271 Water quality improvement by implementation of Proposition O in the Los Angeles river watershed, California  
**Mi-Hyun Park, Stephanie Pincetl and Michael K. Stenstrom**
- 2279 Importance of investment decisions and rehabilitation approaches in an ageing wastewater pipeline network. A case study of Oslo (Norway)  
**Rita Ugarelli, G. Venkatesh, Helge Brattebø and Sveinung Sægvog**
- 2295 Assessing necessary nutrient reduction for measurement planning in groundwater bodies  
**Ralf Kunkel, Michael Eisele and Frank Wendland**
- 2303 Integration of aquatic ecology and biological oceanographic knowledge for development of area-based eutrophication assessment criteria leading to water resource remediation and utilization management: a case study in Tha Chin, the most eutrophic river of Thailand  
**Charumas Meksumpun and Shettapong Meksumpun**
- 2313 Water environment conservation in a closed water body by high concentrated oxygen water  
**Tsuyoshi Imai, Ramida Watanapokasin, Alissara Reungsang, Masahiko Sekine and Takaya Higuchi**
- 2319 Design and operating experiences of municipal MBRs in Europe  
**H. Itokawa, C. Thiemig and J. Pinnekamp**
- 2329 Estimation of pollutant loads considering dam operation in Han River Basin by BASINS/Hydrological Simulation Program-FORTRAN  
**Kwang-Wook Jung, Choon-G Yoon, Jae-Ho Jang and Dong-Soo Kong**
- 2339 Reductive characteristics of washed-off pollution loads by best management practices  
**Sung Ryong Ha and Seung Chul Lee**
- 2347 Evaluation of strips of centipede grass for sediment load reduction  
**Takahiro Shiono, Noburo Haraguchi, Kuniaki Miyamoto, Yoshiyuki Shinogi, Teruhito Miyamoto and Koji Kameyama**
- 2353 Treatment of saline, acidic, metal-contaminated groundwater from the Western Australian Wheatbelt  
**P. D. Franzmann, J. J. Plumb, J. T. Wylie, W. J. Robertson, G. B. Douglas, T. P. Bastow, A. H. Kaksonen and J. A. Puhakka**
- 2365 Microbial ecology and performance of nitrifying bacteria in an aerobic membrane bioreactor treating thin-film transistor liquid crystal display wastewater  
**L. M. Whang, Y. F. Yang, S. J. Huang and S. S. Cheng**
