Vol. 239, No. 6 March 2009

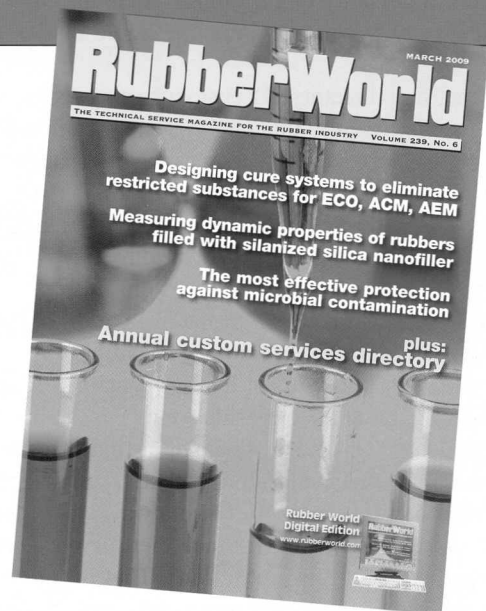

## FEATURES

- 13 Tech Service:  
Sterilization study of  
Santoprene TPV**  
*by George Anthony, ExxonMobil Chemical.*  
Ethylene oxide (EtO), gamma radiation and autoclave methods of sterilization for Santoprene TPV are examined.

- 17 Process Machinery:  
Rotor design - part 2**  
*by Richard J. Jorkasky, II, Kobelco Stewart  
Bolling.* Advanced design of the four-wing N rotor improves rubber mixing.

- 19 Designing cure systems**  
*by Christina Bergmann, Martin Saewe and Steven  
Monthey, Rhein Chemie.* Alternatives to lead,  
thiourea and DOTG curatives are demonstrated to  
eliminate these substances for ECO, ACM and AEM.

- 23 Measuring properties  
of rubbers filled with  
silanized silica nanofiller**  
*by Saeed Ostad Movahed, Ali Ansarifard and Mo  
Song, Loughborough University.* Dynamic  
behaviors of filled blends are studied, with  
emphasis on their capability for use in tire treads.

- 32 Effective protection  
against microbial  
contamination**

*by Carolina Mateus, David Morris and  
Bob Kerr, Milliken Chemical.* Regulatory  
approved technology is said to be the most  
effective protection for rubber components  
against fungi and bacteria growth.

- 42 Custom mixing and  
services directories**

## DEPARTMENTS

- 4 Editorial**  
**6 Business Briefs**  
**11 Patent News**  
**59 Meetings**  
**64 Suppliers Showcase**  
**67 People in the News**  
**71 Literature**

## Digital Edition Content

See the March digital edition of Rubber World for additional content not found in the print edition

- More U.S. patents
- Expanded business news
- Expanded equipment information
- Expanded instrumentation information
- Expanded materials information
- Expanded literature selection
