FEATURES

16 Tech Service: NR in automotive applications

by Benoit Le Rossignol, Yann Fromont and Frederic Gomez, Hutchinson. Evolution of rubber formulations related to the increase in under-hood temperatures is reviewed.

20 Process Machinery: Lead, follow or get out of the way

by Russ Labelle, Wilmington Machinery. The role of proprietary machinery in gaining a competitive edge is examined.

21 Naphthenic extender oils in NR tire tread

by Anita Neau and Marika Rangstedt, Nynas. The authors discuss how the use of different plasticizing oils modifies the properties of a truck tire tread compound based on natural rubber.

28 Improved NR processing and physical properties using selected additives

by Colin Clarke and Manfred Hensel, Schill + Seilacher. Struktol HT 105 succeeds as a viscosity reducing chemical for NR containing formulations.

32 Redesigning OTR compounds with anti-reversion chemistry

by Fred Ignatz-Hoover, Flexsys America; Byron To, Chem Technologies; and Ed Terrill, Akron Rubber Development Laboratory. Comparative benefits of anti-reversion agents in small single component and larger composite rubber parts are explored.

DEPARTMENTS

- 4 Editorial
- 5 Business Briefs
- 10 Market Focus
- 13 Patent News
- 38 Meetings
- 44 Suppliers Showcase
- 48 People in the News
