

Solar pump stations: everything in a box

Solar circulation units combine all the important hydraulic components of a solar thermal installation. They should be as compact and easy to install as possible. The current trend: smart design and integrated solar control units.

Module certification: barrier or benefit

Having a photovoltaic module certified is complex and costly. For the sale of modules, however, the certification marks are both necessary and useful.

Energy storage: electricity on demand

The economical storage of electricity waited in vain for a satisfactory solution over several decades. But intensive work is in the meantime driving advances along various avenues.
