Topical themes

68 Walking beam furnace at California Steel strictly complies with lowest emission limits

Regenerative flameless burners developed by Tenova are installed in this new reheating furnace. The design criteria adopted for this furnace are highlighted here. Main results after several years of furnace operation are presented.

Ironmaking

26 Start-up and operation of the new sinter plants and blast furnaces at Dragon Steel

A completely new integrated steel-works was built in two stages in the harbour area of Taichung, Taiwan.

34 SAIL started up India's largest blast furnace

Erected on greenfield at the Rourkela site, the first hot metal was tapped from BF No. 5 after only 27 hours.

Steelmaking

36 Siemens extends plant portfolio for hot-metal desulphurization

The stirrer-based solution uses lime accumulated in the steel works as desulphurization agent, hence no magnesium or calcium carbide is required.

38 Reduction of total energy consumption in EAF processes by way of reducing energy losses

Numerous EAF plants provide best preconditions for implementing commercial-grade components to reduce the waste of energy. This technical survey deals with possibilities of upgrading existing equipment.

Automation

42 Energy Advisor software provides transparency for plants and processes

SMS Siemag makes available a new software as a management system for relevant energy data which can do more than mere monitoring.

Environmental protection

54 Efforts to reduce cooling water consumption in a region with limited water supply

For a steel plant in a desert area cooling equipment has been adopted to reduce raw water consumption down to approximately only 120 m³/h on a daily average.

Company profiles

62 South Steel commissions new meltshop with rolling mill in Saudi Arabia

64 Siderúrgica Nacional to build a completely new steelworks in Venezuela

Advertisers' index

22 Timken to spin off its steel business into a separate company

46 Emission trade: no global level playing field for the steel industry

Continuous casting

66 Coating technology to increase life time of slab mould plates

Hot rolling

74 In-line heat treatment for thermo-mechanical production of beams

Application of in-line heat treatments to different types of long products has led to specific technological solutions and layout concepts.

80 Ring-rolling mill for Electrostal metallurgical plant

Siempelkamp expands its product range with ring rolling mills. The first plant has passed its crucial test.

Strip processing

84 A new paradigm for strip guiding in furnace atmospheres

A new sensor for strip guiding is mounted outside of the hot area of the furnace. The furnace wall becomes transparent in the true sense of the word.
