The measurement of wool fibre properties and their effect on worsted processing performance and product quality. Part 1: The objective measurement of wool fibre properties

Anton F. Botha
and Lawrance Hunter

Taylor & Francis
Taylor & Francis

CONTENTS

1. Introduction	228
2. The objective measurement of wool fibre properties	233
2.1. Introduction	233
2.1.1. General	233
2.1.2. Fibre property distributions	234
2.2. Wool base, vegetable matter base and yield	235
2.3. Fibre diameter	236
2.3.1. Introduction	236
2.3.2. Laser-based instruments	240
2.3.3. Image analysis based instruments	242
2.3.4. Fibre diameter distribution characteristics	245
2.3.4.1. Introduction	245
2.3.4.2. Fibre diameter distribution	246
2.3.4.3. Coarse edge	246
2.3.5. General	247
2.3.6. Interrelationships between mean fibre diameter, standard deviation, coefficient of variation and coarse edge	250
2.3.6.1. Introduction	250
2.3.6.2. Standard deviation versus mean fibre diameter	250
2.3.6.3. Coefficient of variation of diameter (CV_D) versus mean fibre diameter: Greasy (raw) wool	253
2.3.6.4. Coarse edge versus mean fibre diameter, standard deviation and coefficient of variation. Introduction	255
2.3.6.5. Changes in mean fibre diameter, fibre diameter distribution and coarse edge during processing	257
2.3.7. On-farm and staple profile measurements	260
2.4. Single fibre and staple length	266
2.4.1. Introduction	266
2.4.2. Greasy staple length	267
2.4.3. Relationship between staple length and fibre length within the staple	269
2.4.4. Staple length and fibre length variation	271
2.4.5. Top and sliver fibre length	271
2.4.6. Fibre and staple strength	275
2.4.6.1. Introduction	275
2.4.6.2. Measurement of staple strength	280
2.4.6.3. General conclusions	283
2.5. Colour	283
2.5.1. Introduction	283
2.5.2. Colour measurement	286
2.6. Coloured (dark) and medullated fibres	289

2.6.1.	<i>Introduction</i>	289
2.6.2.	<i>Coloured and medullated fibre measurement and risk schemes</i>	291
2.7.	Fibre crimp	294
2.7.1.	<i>Introduction</i>	294
2.7.2.	<i>Staple crimp</i>	295
2.7.3.	<i>Resistance to compression</i>	296
2.7.4.	<i>Curvature</i>	297
2.7.5.	<i>Interrelationship between fibre crimp and other fibre properties</i>	300
	2.7.5.1. <i>Interrelationship between staple crimp, diameter and resistance to compression</i>	300
	2.7.5.2. <i>Interrelationship between single fibre crimp, curvature, resistance to compression (bulk) and diameter</i>	301
	2.7.5.3. <i>Relationship between crimp and strength</i>	302
2.8.	Style	302
2.9.	Miscellaneous tests	305
3.	Concluding remarks and further reading	306
