## 10 | Adifo combines software with industry needs

Software developments happen fast and due to the specific needs of a feed mill, changeover to a full control system is an arduous undertaking. Software developers at Adifo tackled this challenge by using generic Microsoft programs and infusing these with industry specific applications.

## 14 | The deadly danger of dust particles

If you google on the Internet the words "feed mill" and "fire" it gives you over 100,000 results. This suggests that a feed mill is a definite fire hazard. In most cases, dust is the accelerating cause for mills to completely burn down or in the worst case to explode. Enough reason to pay attention to explosion prevention.

## 18 | Expansion for 'magic' feed processing line

At the end of 2005, Vitelia feed manufactured the first feed with their new production line "Magi-con". It is the first and only plant, that has arranged its lay-out in such a way that feeds can be manufactured and controlled on contents and shape of the final product.

## 24 | Petfood: Keeping it fresh and tasty

The 4th Kemin Annual Petfood Symposium held in Prague, October 21-22 brought together experts from around the world to discuss palatability and freshness, issues that are probably some of the most important ones to consider while producing profitable petfood.
