12 | Filled GM-pipeline to cause further problems in international trade

Different countries have different authorisation procedures for GM crops. This causes confusion and problems in international trading of these commodities. The European Joint Research Centre wrote a report about this subject and the authors Alexander Stein and Emilio Rodriguez-Cerezo discuss the implications for international trade in this executive summary.

16 | Modern milling and mixing make chickens munch more

Vitelia Voeders in the south of the Netherlands improves the intake of poultry feed by using an innovative Magi-Mill® installation and a new Pegasus Mixer®. Yield improvements have already been realised equivalent to €1 per laying hen.

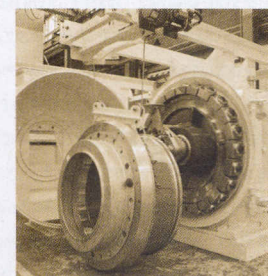

18 | Formulation software gives decision making edge

Formulation is becoming more of a general management tool in the feed business. Technology to support the evolving formulation processes gives manufacturers peace of mind that their investments give them the decision making edge. Feed Tech asked several companies how they deal with the increasing demand for information.

28 | Pelleting: The link between practice and engineering

A feed mill needs to produce pellets in a hygienic way with the least costs and the highest efficiency. This cannot be realised without the close relationship between the operators in the field and the engineers at the drawing table. CPM Europe has been able to launch many 'firsts' which have later been adopted and copied to industry standards.
